

Problem 6.14 – Three functional pipelines $f_1, f_2,$ and f_3 are characterized by the following reservation tables. Using these three pipelines, a composite pipeline network is formed below :

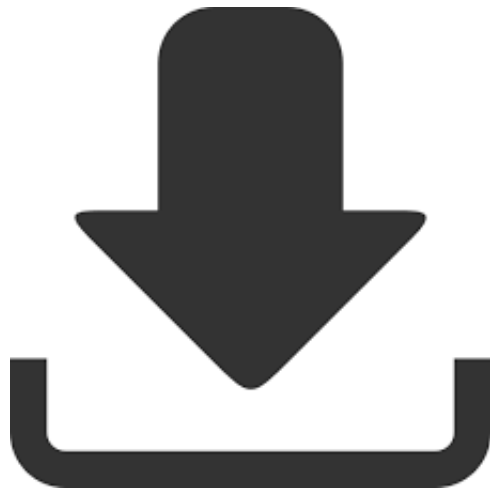

Each task going through this composite pipeline uses the pipeline in the following **order**: f_1 first, f_2 and f_3 next, f_1 again, and then the output is obtained. The dual multiplexer selects a pair of inputs, (A,B) or (X,Y), and feeds them into the input of f_1 . The use of composite pipeline is described by the combined reservation table.

	1	2	3	4
S1	X			
S2		X		
S3			X	X

	1	2	3	4
T1	X			X
T2		X		
T3			X	

	1	2	3	4
U1	X		X	
U2				X
U3		X		

- Complete the reservation table for this composite pipeline.
- Write the forbidden list and the initial collision vector.
- Draw a state diagram clearly showing all latency cycles.
- List all simple cycles and greedy cycles.
- Calculate the MAL and the maximal throughput of this composite pipeline.
